RUSSIAN ALUMINIUM CASTING

RUSALIT

Vsevolzsk plant of aluminum alloys

Saint-Petersburg, Russia

RUSALIT Group of Companies represents one of the major producers and the largest trade operator on the secondary aluminum market of Russia.

The Group's production company "Vsevolzhsk Plant of Aluminum Alloys" ("VZAS"), Saint Petersburg, is equipped with up to date scrap upgrading and analytical equipment that allows for the annual output at the level of 40 k tons of alloys. Due to high output volumes, the demand for raw materials is also high. Top-priority raw materials are aluminum cans, filings, dross, various types of waste of aluminum foil and tape production, wrought alloys scrap. Sophisticated production technologies provide for ability to process the most difficult scrap types that can not be processed by other producers. Being a unique company in terms of technology and equipment used, "VZAS" is the only plant in Russia producing aluminum alloys type 3104 (alloy for production of aluminium tape and cans) from secondary materials (aluminum cans).

Long-term experience of working with international customers, irreproachable reputation and excellent understanding of the market allow the Company to provide its Russian customers with the services of selling their products on international markets, including assisting with customs proceedings, certification, legal support of export contracts as well as control of due quality of currency control services provided by the «Passport» bank.

RUSALIT Group is open for winning relationships with any conscientious market players, as well as participation in joint projects in secondary aluminium metallurgy and related industries.
